

With these polishing rods you can carry out finishing on precision parts or aspect parts.

They are remarkably easy to use and effective on all metals in precision operations in the field of mechanical polishing, in retouching work on injection moulds and in machine restoration.

**"CERAMIC" POLISHING RODS**

Ref. **CC-030**  
**Polishing kit**  
**5 Ceramic polishing rods**  
 (with different abrasive grains)

The self-grinding effect means that ceramic components always have optimal contact with the surface of the workpiece.

The perfect combination of ceramic grains and rubber binder avoids any problems of jamming and clogging. These abrasives can work as well dry or lubricated.

Retouching of machine slide

**Grain fineness**

- # 46 (grey) the roughest
- # 80 (pink)
- # 120 (blue)
- # 220 (yellow)
- # 320 (purple) the finest
